Overview Column
Stable rollout evidence stays attached to the blocking gate.

Details Column
Native layout should outrank OCR-only evidence for the same section.

Figure 13
Approval topology by rollout lane.
Figure body explains early rollout evidence and remediation state.

Approval Matrix

Lane | Status
Stable | Blocked pending remediation evidence and runtime verification
Canary | Ready after benchmark approval and rollback acknowledgement
Rollback | Review after release evidence and ownership confirmation
Hotfix | Ready once incident review and signoff are complete

Operations Column
Escalation evidence should stay local to the mid-rollout control plane.

Evidence Column
Hybrid reconciliation should preserve native tables beside OCR supplement.

Figure 14
Escalation owner by environment.
Figure body explains ownership and rollback acknowledgement state.

Escalation Matrix

Environment | Owner
Stable | Release lead coordinating remediation verification and rollback signoff
Canary | On-call coordinating benchmark review and acknowledgement
Rollback | Operations coordinating runtime planner approval and artifact review
Hotfix | Incident commander coordinating final mitigation and escalation closure

Handoff Column
Late-page handoff evidence should stay visible with OCR supplement.

Support Column
Mixed columns should preserve source-aware sections across repeated figures and tables.

Figure 15
Handoff verification by environment.
Figure body explains late-page acknowledgement and promotion readiness.

Handoff Matrix

Environment | Gate
Stable | Awaiting release manager approval after remediation evidence and runtime review
Canary | Awaiting rollback acknowledgement after benchmark and handoff verification
Preview | Awaiting benchmark signoff after evidence reconcile confirmation
Hotfix | Awaiting incident review after mitigation and release note confirmation
